Art Unit: 1723

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Harland 5791370.

Harland teaches a heat exchange chamber 18, 11, fig 3, an inlet 29, inner (main) tube 17 with branch tubes 22 with openings 24 facing the surface 3 of the outer body for the flow of a heat transfer medium. Note that the inner tube may be flexible so as to fit into the outer body of an existing system, column 3, lines 27-30.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claims 4 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harland 5791370 in view of Hupf 4697501.

The Harland reference discloses all of the recited subject matter as defined within the scope of the claims with the exception of having a coiled spring about the tube to support the tube.

The reference to Hupf teaches to a person having ordinary skill in the art of hose making that one may utilize a coil spring to support a plastic conduit in the proper position, column 1, lines 45-48, and column 2, lines 58-60, and column 3, lines 32-33.

In view of the teaching of Hupf, it is deemed that it would have been obvious to one of ordinary skill in the art to provide the flexible conduit of Harland with a coil spring with a respective spacing and coil contact so that the flexible conduit is better supported and properly positioned in the body.

6. Claims 3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harland 5791370 in view of Banbury 1881994.

The Harland reference discloses all of the recited subject matter as defined within the scope of the claims with the exception having nozzles (claim 3) and having a kneading extruder rotor with a non-circular cross section.

The reference to Banbury teaches that a heat exchange device may be used in combination with a kneading rotor whereby fluid is sprayed to the rotor.

Accordingly, it is deemed that it would have been obvious to one of ordinary skill in the art to substitute for the body of Harland, with a kneading rotor body as taught by

Application/Control Number: 10/657,253 Page 4

Art Unit: 1723

Banbury, and to provide spray nozzles at the end of the branch tubes so that the device of Harland may more effectively provide a heat exchange onto a kneading rotor.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following disclose the state of the art of heat exchangers for a kneading rotor: Bittner et al 3820597, Engels 3734471, Dew, Jr et al 3563710, Christen et al 44316671, O'Mara 3020025, Root III 3285330, Christen 4527902. Driver 4233820 teaches the use of a spring coil upon a conduit.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tony G. Soohoo whose telephone number is (571) 272 1147. The examiner can normally be reached on 7-5PM, Tue-Fri (As of 9/05 Fax will be 571-273-8300.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda Walker can be reached on 571-272-1151. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
